

# LN-QD-B50 INFRARED (IR) ILLUMINATOR

## BUILT-IN INFRARED (IR) ILLUMINATOR

Binoculars come with a standard built-in IR illuminator.  
850nm allows further detection distance in the dark,  
while not spooking the animals.

The infrared brightness levels can be adjusted from 1 to 3.

**IR** Level 1

**IR** Level 2

**IR** Level 3

The infrared beam can be focused (far) or scattered (near).

### INFRARED LIGHT

The **INFRARED LIGHT** can be rotated to adjust the shape of the infrared beam: **FOCUS** and **SCATTER**.

### FOCUS

When the infrared beam is **FOCUSED**, you will see further in the dark.

### SCATTER

When the infrared beam is **SCATTERED**, you will illuminate a larger area.
