

LN-QE-RS35-LRF / LN-QE-RS50-LRF INFRARED (IR) ILLUMINATOR

IR ILLUMINATOR

Every scope comes standard with an 850nm IR illuminator. 850nm allows further detection distance while not spooking the animals.

The infrared brightness levels can be adjusted from 1 to 3.

IR Level 1

IR Level 2

IR Level 3

The infrared beam can be focused (far) or scattered (near).

INFRARED LIGHT

The **INFRARED LIGHT** can be rotated to adjust the shape of the infrared beam: **FOCUS** and **SCATTER**.

FOCUS

When the infrared beam is **FOCUSED**, you will see further in the dark.

SCATTER

When the infrared beam is **SCATTERED**, you will illuminate a larger area.
