

STARGAZER-QD INFRARED (IR) ILLUMINATOR

BUILT-IN INFRARED (IR) ILLUMINATOR

Binoculars come with a standard built-in IR illuminator.
850nm allows further detection distance in the dark,
while not spooking the animals.

The infrared brightness levels can be adjusted from 1 to 3.

IR Level 1

IR Level 2

IR Level 3

The infrared beam can be focused (far) or scattered (near).

INFRARED LIGHT

The **INFRARED LIGHT** can be rotated to adjust the shape of the infrared beam: **FOCUS** and **SCATTER**.

FOCUS

When the infrared beam is **FOCUSED**, you will see further in the dark.

SCATTER

When the infrared beam is **SCATTERED**, you will illuminate a larger area.
